TISSUE SPECIFICITY: WIDESPREAD EXPRESSION IN THE EMBRYO.

DEVELOPMENTAL STAGE: EXPRESSED IN THE PRESUMPTIVE MIDBRAIN OF
DEVELOPING EMBRYOS FROM THE SIX-SOMITE STAGE. BY 24 HOURS IT

EXPRESSED THROUGHOUT THE MIDBRAIN INCLUDING THE REGION OF THE
PRESUMPTIVE TECTUM. AT LATER STAGES IT IS EXPRESSED IN A GRADI
FASHION THROUGHOUT THE TECTUM.

SIMILARITY: BELONGS TO THE EPHRIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  29 LGNRHAVYWNSSNQHLRREGYTVQVNVNDYLDIYCPHYNSSGVGPGAGPGPGGGAEQYVL

Flenniken A.M., Gale N.W., Yancopoulos G.D., Wilkinson D.G.;

Thistinct and overlapping expression patterns of ligands for generated receptor tyrosine kinases during mouse embryogenesis.";

EDP. EDP. Biol. 179:382-401(1996).

- I. FUNCTION: MAY FUNCTION ACTIVELY TO STIMULATE AXON FASCICULATION.

INDUCES COMPARTMENTALIZED SIGNALING WITHIN A CAVEOLAE-LIKE MEMBRANE MICRODOMAIN WHEN BOUND TO THE EXTRACELLULAR DOMAIN OF ITS COGNATE RECEPTOR. THIS SIGNALLING EVENT REQUIRES THE ACTIVITY OF THE FYN TYROSINE KINASE (BY SIMILARITY).

- I. SUBCELLULAR LOCATION: ATTACHED TO THE MEMBRANE BY A GPI-ANCHOR IT IS COMPARTMENTALIZED IN DISCRETE CAVEOLAE-LIKE MEMBRANE

MICRODOMAINS (BY SIMILARITY).

- I. ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SHOWN HERE) AND A SHORT FORM; ARE PRODUCED BY ALTERNATIVE SPLICING.

- I. SIMILARITY: BELONGS TO THE EPHRIN FAMILY.

"Ligands for the receptor tyrosine kinases hek and elk: isolation of concogene 10:299-306(1995).
-!- SUBUNIT: BINDS TO THE RECEPTOR TYROSINE KINASES EPHA2, EPHA4,
EPHA5, EPHA6 AND EPHA7. ALSO BINDS WITH LOW AFFINITY TO EPHA1.
-!- SUBCELLULAR LOCATION: Attached to the membrane by a GPI-anchor-
-!- INDUCTION: BY TNF-ALPHA AND INTERLEUKIN-1 BETA.
-!- SIMILARITY: BELONGS TO THE EPHRIN FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             RESULT 10
S46993
elk ligand - human
C; Species: Homo sapiens (man)
C; Date: 15-Jul-1995 #sequence_revision 10-Nov-1995 #text_change 28-May
C; Accession: 846993
R; Beckmann, M.P.; Cerretti, D.P.; Baum, P.; vanden Bos, T.; James, L.;
EMBO J. 13, 3757-3762, 1994
A; Title: Molecular characterization of a family of ligands for eph-rel
A; Reference number: 846993; MUID:94349923
A; Accession: 846993
A; Accession: 846993
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-346 < BEC>
A; Cross-references: GB:U09304; NID:9538366; PIDN:AAA53093.1; PID:95383
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GRPYEYYKLY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | :| :| : |: | | 137 TSNGSLEGLENREGGVCRTRTMKIIMKVGQDPNAVTPEQLTTSRPSKEADNTVKMATQAP

                                                                                              The sequence is that of a novel protein designated hek-L, a protein that can bind hek (a cell surface receptor tyrosine kinase). Hek-L is the first known ligand for hek and can be used to study cellular processes regulated by hek (which may be involved in tumorigenesis). It is also an immunogen for antibody production, as a reagent for detecting hek or hek-L in in vitro assays, to determine binding of hek proteins, to purify hek proteins, and to carry diagnostic or cytotoxic agents to particular leukaemia cells that express the hek antigen. Hek-L also binds the elk tyrosine kinase receptors.

Efl-2 (also known as EHK-1L) is an Eph transmembrane tyrosine kinase family ligand. It has homology with B61 (Efl-1) (see AAR82604). Efl-2 ends in a C-terminal hydrophobic sequence that appears to to be a recognition sequence allowing it to be GPI-linked and thus lacking in an intracellular domain. Efl-2 is useful for identifying other ligands for Ehk-1, -2, -3, Eck and Elk receptors. The ligands are useful in promoting a differential function and/or influencing the phenotye, such as growth and/or proliferation, of receptor bearing cells. They may be used in the diagnosis, and treatment of neurological disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CAS-T 170
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A novel mouse EPH receptor ligand, Elf-1 (AAR94766), is involved in the formation and maintenance of ordered spatial arrangements of differentiated tissue. It is the product of a cDNA clone (AAT15008) obtd. from an embryo mid- and hind-brain cDNA expression library. This cDNA is used for the rrodn. of recombinant Elf-1, which can be used to modulate proliferation, survival and/or differentiation of cells and tissues, and to stimulate or antagonise intracellular signal transduction pathways mediated by the EPH-type receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                             diagnosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a mammalian EPH receptor ligand designated Elf-1. This ligand can bind to both mek-4 and sek-AP. Elf-1 a tyrosine kinase ligand, which is linked to the membrane through a phosphatidylinositol linkage. It shares some homology to 2 other EPH receptor ligands, B61 and LERK-2. The Elf-1 protein modulates proliferation, differentiation and survival of EPH receptor-expressing cells by stimulating or antagonising intracellular signalling mediated by the EPH receptor. Typical of many potential applications are increasing survival of neuronal cells in culture (e.g. where intended itransplantation), also therapeutically in increase neuron survival (e.g. treatment of Alzheimer's or Parkinson's diseases), to prevent nervous system and lymphatic tumours, to induce differentiation of hepatocytes to form an artificial liver, to induce cartilage and bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Nucleic acid encoding Elf-1 protein that binds to EPH-type receptor for production of Elf-1 protein, useful for regulating proliferation, differentiation, and survival of cells
                                                                                                                                                                                                                                                                                                                                                   site"

comprising the LERK-6 nucleic acid sequences are used for the recombinant comprising the LERK-6 nucleic acid sequences are used for the recombinant production of the proteins. LERK-6 polypeptides may be useful in the chancement, stimulation, proliferation or growth of cells expressing the hek or elk receptor. The ligand and receptor complex may be involved in cheural growth, development and/or maintenance. LERK-6 can be used for treating disorders of neural tissue such as injury or neurological diseases, either chronic or acute. LERK-6 may be employed in treating neurodegenerative conditions where there is neural death, excitotoxicity. In addition, they may be administered to a mammal to exert a trophic of effect on neural tissue. They can also be used as reagents for those conducting quality assurance studies e.g. to monitor shelf life and stability of elk protein under different conditions. The polypeptides can stability of elk protein under different conditions. The polypeptides can also be used as carriers for delivering agents attached to cells bearing theman LERK-6 polypeptide. The present sequence represents a

213 AA; Sequence

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical maging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations

    biodiversity
responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                       A novel chicken EPH receptor ligand, Elf-1 (AAR94767), is involved in the formation and maintenance of ordered spatial arrangements of differentiated tissue. It is the product of a cDNA clone (AAT15009) obtd. from an embryo cDNA expression library. This cDNA is used for the prodn. of recombinant Elf-1, which can be used to modulate proliferation, survival and/or differentiation of cells and tissues, and to stimulate or antagonise intracellular signal transduction
                                                                                                                                                                                                                                                                                                                                            Gaps
